

**Angled
Ridge End Cap
(GPPV-END-A)**

**Round
Ridge End Cap
(GPPV-END-R)**

Description

The Polypropylene Ridge End Caps are designed to work in conjunction with the SmartVerge Polypropylene Dry Verge Systems, both handed and ambidextrous, to provide a neat and attractive finish for most makes of round and angled concrete ridge tiles.

The Ridge End Caps provide durable protection at each end of the ridge, eliminating problems caused by water penetration whilst preventing the entry of birds and large insects into the roof cavity. Each Ridge End Cap is supplied with fixings and can be quickly and easily fixed directly to the ridge batten(s) in all weather conditions.

The end caps can also be used in conjunction with the Manthorpe dry fix ridge systems to close off the ridge ends.

Features

- Fast and easy to install, dry fix verge system.
- Suits both round and angled, concrete and clay ridges.
- Suitable for most makes of half round, segmental, universal angle & modern ridge tiles.
- Provides a mechanically fixed, mortar-free solution.
- Protects the ridge end from exposure to the elements.
- Also helps to prevent the entry of birds and large insects.
- Suitable for both new build and refurbishment details.
- Can be installed on roof pitches between 15° and 55°.
- Drains moisture away from the wall to prevent staining.
- Manufactured from UV stabilised polypropylene.
- Available in a range of colours to suit various roof types.
- System independently wind tunnel tested at the BRE.
