

# EASY SOAKER

## FITTING GUIDE

### FEATURES AND BENEFITS

- ✓ Unique continuous soaker system for slates.
- ✓ Anti-theft design with no scrap value.
- ✓ Maintenance free; quick and easy to install.
- ✓ No streaking or staining.
- ✓ Can be used with all standard natural and manmade slates.

Made from high grade material Permavent EASY SOAKER provides a continuous, robust, and cost-effective alternative to lead soakers at side abutments.

### INSTALLATION GUIDANCE

At abutments Permavent membranes should be turned up the abutment by not less than 50 mm under the flashings.

Install the first eave course of slate as standard. EASY SOAKER is then placed above the eave slate, abutting the wall (Fig 1). Continue the remaining section of EASY SOAKER up the elevation, resting above the slate battens (Fig 2).

EASY SOAKER can be lap joined: Using a sharp blade, remove 100mm of rubber seals on the top section of the soaker. This will allow the length of the next soaker to sit flush. The lap should always be located above, and supported by, a slating batten.

EASY SOAKER will be fully secured in place when each slate is laid and nailed down.

Install an appropriate lead-flashing or flashing alternative in a traditional manner to complete the detail.
